

SPOOLING

**SAVE BIG ON
INSTALLATION TIME IN
THE FIELD**

**WITH SUPERIOR DUCT'S
SPOOLING PROGRAM!**

This is an example of a 25' run ready for installation right off the truck!

Superior Duct's "Spooling Program" is simple, you provide us with your AutoDesk Fabrication ready model, and we take it from there. Superior's experienced staff will create spools using AutoDesk Fabrication software and our production team will assemble the spooled sections. All assembly is done in our state-of-the-art fabrication facility, which provides a controlled environment and access to innovative tools and procedures.

We will work closely with your team to create spool assemblies, generate spool sheets, and deliver pre-assembled duct runs directly to your jobsite. You will be amazed at the reduction of installation time, and the savings of reduced labor costs! The only limitation with spooling is what can be safely transported on one of our trucks. No more downtime due to weather, missing parts or tools. We are here to make your job run as efficiently as possible! Call Superior Duct and start saving time and money today!
